

We are hiring!

Are you an experienced Raman Applications Scientist?

Working with a team of Applications Scientists, this role focuses on technical sales support and application development.

Responsibilities

- Demonstrate the capabilities and performance of Renishaw's Raman instrumentation on a range of customer samples
- Lead new application development campaigns, presenting at international conferences, seminars and workshops
- Training of customers who have purchased Raman instrumentation
- Support the production of marketing communications literature, including brochures, presentations, posters and notes

Key requirements

- PhD in a science related discipline
- Practical experimental skills using Raman instrumentation
- Excellent written and verbal communication skills

Desirable requirements

- Experience analysing a variety of different sample types and mapping using Raman instrumentation
- Knowledge of different capabilities of the inVia Raman microscope
- Knowledge and appreciation of how to structure analytical experiments

Person specification

You will have an assured and outgoing personality which conveys and instils confidence, and will be able to rationalise your workload and understand key parameters which affect importance and urgency. You will have the ability to meet deadlines, to multi-task and have good attention to detail. You will also be resourceful, willing to learn new skills, and able to problem solve. The ability to plan well is important as this role requires a combination of independent and team working using shared resources.
